

## Taller Arduino @ FAU

Fab Lab Universidad de Chile

#### **Arduino**

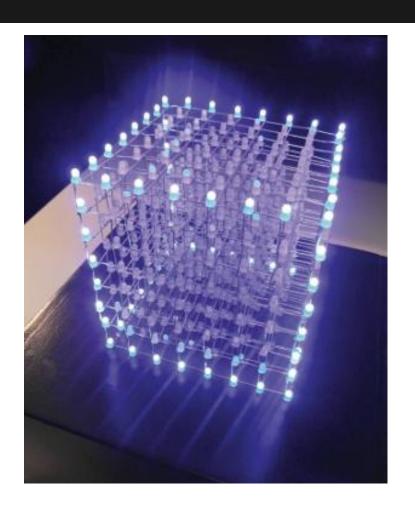

"Arduino es una plataforma de **hardware libre**, basada en una placa con un **microcontrolador** y un **entorno de desarrollo**, diseñada para facilitar el uso de la electrónica en proyectos multidisciplinares ..."

"Por otro lado el **software** consiste en un entorno de desarrollo que implementa el lenguaje de programación Processing/Wiring y el cargador de arranque (boot loader) que corre en la placa ..."

### Nemore

#### 3D Clock

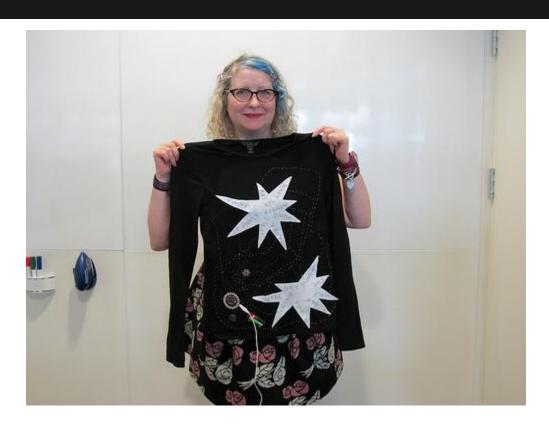

"Controlling all 512 LEDs individually was a challenge," admits Mechatronics graduate Nick Schulze. "My original blue cube was controlled entirely from an Arduino, while for the larger RGB cube I upgraded the controller to Arduino-compatible board chipKIT, which boasts a lot more power. I also take advantage of Arduino's RTC shield to turn my cube into a 3D clock"

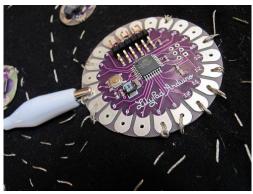

#### **Immersion**

25 hanging stripes controlled by Arduino

#### **Twinkle Tartiflette**

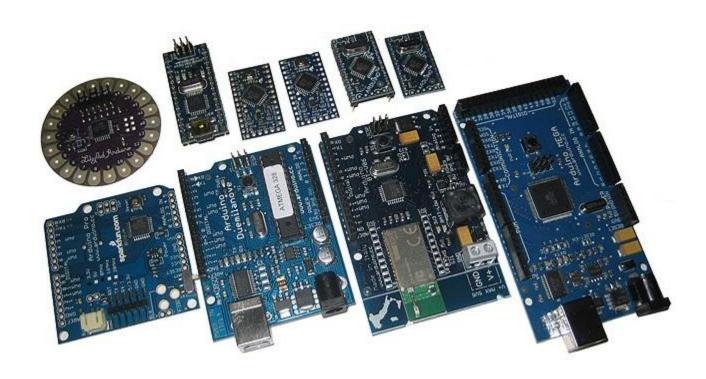

" ... An Arduino driven interactive word/music artwork ...

...The code I have written uses the speaker module to produce simple musical notes from connecting to the words with a stylus. I originally used a chart to match frequencies to the different notes..."

### ArduinoS

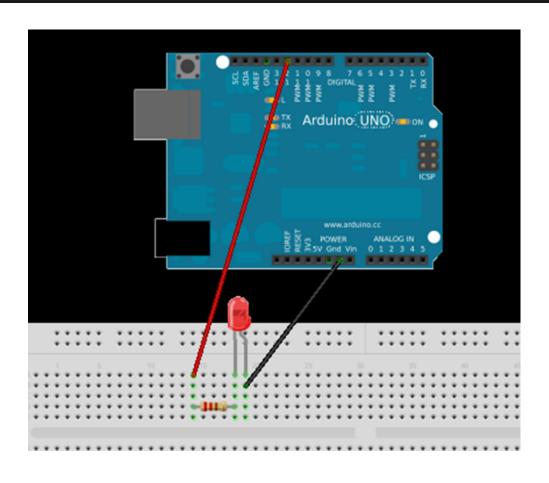

... y 100% customizable (OpenHardware)!!!

# Cómo? IDE-> Codigo -> Arduino

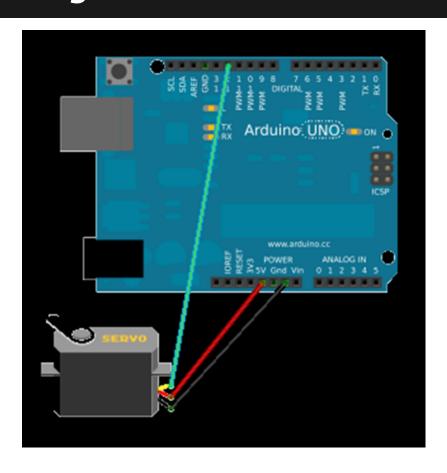

```
// Esto es un comentario (no se ejecuta), se reconoce por el "//"
int led = 13; // Esta es una variable global del tipo "int"
// Este bloque de código (setup) se ejecuta una sola vez
void setup() {
pinMode(led, OUTPUT);
// Este bloque (void) se repite una y otra vez
void loop() {
digitalWrite(led, HIGH); // turn the LED on (HIGH is the voltage level)
delay(1000);
                      // wait for a second
digitalWrite(led, LOW); // turn the LED off by making the voltage LOW
delay(1000);
                      // wait for a second
```

# Ejercicio I - Led

Archivos -> Ejemplos -> Basic -> Blink

### Ejercicio II - Servos

Archivos -> Ejemplos -> Servo-> Sweep

# Ejercicio III - LeServoKit
